TECHNICAL DATA SHEET

SILICONE THINNER

Cast-a-Mold silicone thinner is a dimethyl fluid with a viscosity of 50 cps. This thinner will be compatible with any of our silicone rubbers. Lowering the viscosity of a mold making rubber will allow the silicone to flow more easily into smaller detailed areas.

BEFORE USE: Thoroughly read Safety Data Sheets, product labels and this Technical Data Sheet.

BEFORE YOU BEGIN

Materials: Be prepared with all necessary materials and tools before beginning your project. These items might include (but are not limited to) two-part resin kit (Parts A and B), graduated mixing containers, clean stir sticks or power mixer, gloves, drop cloth, casting molds, release agents, etc.

IMPORTANT: PLEASE NOTE

- We recommend adding no more than 3% to 5%. Adding too much silicone thinner can adversely affect the physical properties of the silicone itself.
- If too much thinner is used, tear and tensile strength will be lowered.
- The thinner can also be used to help replenish the life of a silicone mold. We recommend brushing a small amount into the mold before storage.

CLEAN UP & DISPOSAL

Tools can be cleaned with Isopropyl Alcohol 99% or a residue-free cleaner. Do not use soap and water.

Dispose of product, applicators, and container according to Federal, State and local regulations. Store any remaining product in the original bottles, tightly sealed and locked up in a cool, dry environment. Keep out of reach of children.

DISCLAIMER: The information contained herein is considered accurate; however, Specialty Resins makes no warranty regarding its accuracy. The user must determine the suitability of the product for the intended use and accepts all risk and liability associated with that use.
